

## Which wools stretches the most?

You will need

- Wool
- Weights
- Ruler

To make it fair we will need to

- Make the wool the same length
- Use the same weights each time.

The thing we will have to change is.

- The type of wool.

The first thing we need to do is measure some wool the same length.

Then we are going to use the weights to see how far each piece of wool goes.

Then we are going to measure how far the wool has stretched.

Then we are going to record all our information either on a work sheet or a graph

Our prediction is A.
